Flower Bulb Company Announces New Website

New Online Business Offers Extended Quality Information On Flower Bulbs And Perennials.

BATESVILLE, AR, November 21, 2008 **/24-7PressRelease/** -- Like people, individual homes are unlike any other, reflecting an aura all its own. Each home's appearance can tell a little, or a lot, about their occupant's personalities. For instance, some homes may have many toys scattered throughout the yard, reflecting that children probably live in the home and are often at play. Some homes may be in the center of a wooded area, hidden from passer-biers, reflecting that the owners like their privacy. Others may display beautiful flower landscapes and flower gardens creating a more friendly and welcoming appearances.

You know the saying, "your home is your castle", well, that's exactly what Kathy and Robert believe. Kathy states, "In early 1999 when we moved into "our castle", everything looked so drab and dead." It wouldn't be long before deciding that their home needed to look alive and have some color. Kathy continues, "we have planted more flowers every year since then." Robert explains that, "it was not easy getting any plant to establish itself since we get daily visits from neighboring chickens. Chickens like to eat seeds, and with their digging habits they can eat and destroy many plants quickly. This is the main reason our most successful flowers are grown from flower bulbs and perennials". Kathy concludes, "Annuals don't seem to stand a chance."

To this day, Kathy and Robert continue planting and growing flower bulbs and perennials to help transform their home into their castle. However, sometimes they get frustrated when their flower gardens do not bloom or grow as planned, or when specific information about the plant was unavailable. Frustrated enough, in fact, that they decided to launch their own website.

QualityFlowerBulbs.com is an exciting new website founded and operated by husband and wife, Robert and Kathy Case. The online store offers plants such as flower bulbs, including corms, rhizomes, tubers plants, and tuberous root plants with informative details and images. The site continues to grow as new information is added or updated at a regularly pace.
